The Yamaha VmaxThe Yamaha Vmax is a well known motorcycle. With its bad steering capacity, a flexible frame and a shit load of torque, horsepower and weight this bike is a true cult bike. With some work this bike can even be used to take a corner at a higher speed. So why did I bought this bike? I had 5 reasons to do so:

It's not your average bike which you see every day.

It has enough power so it is not boring.

I wanted to have a bike with good touring capacities.

A Vmax is a great motorcycle to modify and to learn a lot.

I can ride a motorcycle again since my KLR is still broken

The Vmax which I have bought is the 145hp version with the V-boost and the better set of cams.
